

FACIAL AESTHETICS

Emage 3D Skin Analysis

BEFORE YOUR APPOINTMENT

- Arrive with a clean face — no makeup, sunscreen, or heavy moisturizer, as these obscure the surface and skew the reading.
- Avoid tanning or significant sun exposure in the days before your scan, so your baseline reflects your true skin condition.
- If you wear contact lenses, that's fine — the scan is completely non-contact.
- Bring a list of the skincare products you currently use so we can build recommendations around what you already own.

AFTER YOUR TREATMENT

Immediately After

There is no recovery whatsoever. The scan is non-invasive and non-contact — you can apply makeup and return to your day immediately.

Your Results

We review your report with you on screen, showing sun damage, pigmentation, vascular patterns, pore condition, and wrinkle depth mapped across your face and scored against age and skin-type norms.

Building Your Plan

Findings guide what we recommend — CO2 resurfacing, microneedling, a facial protocol, or an at-home regimen. You'll leave knowing what your skin actually needs rather than guessing.

Tracking Progress

We recommend repeating the scan every three to six months so you can compare side by side and confirm objectively that your plan is working.

These are general guidelines. Any instructions given to you for your specific treatment always take priority. If something doesn't feel right — severe or increasing pain, bleeding that won't stop, fever, spreading redness, or a reaction to medication — call us at (407) 678-1400.
